

Pearson $r = 0.889$
View wins: G 50.5% | T 49.5%

Pearson $r = 0.782$
View wins: G 49.1% | T 50.9%

This scatter plot shows the relationship between Global absolute error (x-axis) and Token absolute error (y-axis). Both axes range from 0.0 to 1.5. A dashed diagonal line represents the identity line (y=x). The data points are blue dots, showing a positive correlation. The text in the plot indicates a Pearson correlation coefficient of $r = 0.782$ and that the view wins 49.1% of the time compared to the token's 50.9%.

This scatter plot displays the Normalized Mean Absolute Error (MAE) for ten different properties, comparing four methods: Global (blue circles), Token (teal squares), Dual (red diamonds), and Oracle (purple crosses). The x-axis represents the Normalized MAE, with a global average of 1.0. The y-axis lists the properties. The Oracle method consistently shows the lowest error across all properties, while the Global method generally shows the highest error.

Property	Global	Token	Dual	Oracle
J-Bandgap_MBJ	1.00	1.03	0.98	0.74
J-Bandgap_OPT	0.99	0.98	0.94	0.71
